ENVIRONMENTAL MANAGEMENT ISO SYSTEM 14001 FOR THE BEACHES OF CHICLANA

The SGMA "La Barrosa beach" and "Sancti Petri beach" is a work method instigated by the city council and Chiclana Natural, S.A., in order to provide a continuous improvement to beach activities with the aim of greater protection for the environment.

The participation of all members of the System is fundamental for this improvement. These are: cleaning and installation companies, the stalls, bars and hotels, the day-care centre, First Aid Rescue Service, Civil Protection, as well as users of the facilities (bathers, fishermen, sunbathers, participants in organised sporting activities, etc).

MANAGEMENT SYSTEM FOR PUBLIC USE OF THE BEACHES OF CHICLANA

The "Management System for Public Use of Beaches" (Q) seeks to define the requirements of the Quality Management System, environment and to prevent sanitary risks, which are applicable to the activities, services and installations used by the public on the beaches. It is a document initiated by the General Secretary of Tourism and the Institute for Spanish Quality Tourism, to improve quality at all levels.

The requirements apply to all the management processes connected to all the infrastructures installations, services and processes which affect all management directly or indirectly, in particular areas of Security, Life guard service, Information, Cleanliness and Maintenance of Installations, Equipment and Leisure Services.

INTEGRATED POLICY.

The Management System undertakes a policy of Quality and Environmental Control as defined by the Management Regulations in all the areas and implied departments.

This integrated policy is committed to improve the efficiency of the existing systems and the prevention of contamination and hygiene risks. The policy is documented, established and promoted by all members involved with the system. It is also at the disposition of the public who request it.

EUROPEAN ECO-MANAGEMENT AND AUDIT SCHEME (EMAS)

EMAS (Eco-Management and Audit Scheme) is a tool of environmental management emanating from EU's voluntary regulation. It recognises those organizations that have set up a SGMA (System of Environmental Management) and given a commitment to continuous improvement, verified through independent audits.

EMAS aims at promoting continuous environmental behaviour improvements of organizations through the application and establishment of an environmental management system. In order to achieve this aim, the regulation sets out specific requirements that must be respected by those organizations that want to apply the EMAS and to be part of the EMAS registration.

INDICATORS

The Organisation has information available regarding all matters and this is at the disposition of the public in the offices of Chiclana Natural. We have to stress the following:

- Bathing waters analysis.
- Response times for emergencies and maintenance.
- Satisfaction of beach users.
